PREFACE

This bulletin is mainly a compilation of tables which show monthly changes in Canadian living costs from 1913 to August, 1939. Separate statements of monthly average retail prices of 27 principal foods have been included. It was believed that an arrangement of these data in compact form would provide a useful background for the study of relative living cost levels and retail price trends. Other related data are to be found in the report "Prices and Price Indexes" published annually since 1922, and in a bulletin of the same title issued by the Bureau each month.

Cost of living indexes shown on Pages 28-36 have been designed to measure changes in average living cost levels for Canada as a whole. The retail price averages for foods have been based upon quotations from independent retailers in more than 60 cities representing all provinces of the Dominion.

R. H. COATS,  
DOMINION STATISTICIAN.

LIVING COSTS IN CANADA, 1913-AUGUST 1939.

GENERAL

The general level of living costs in Canada at the beginning of August 1939 was less than 9 per cent above the depression low of 1933. It was 17 per cent lower than the 1926 average which is representative of the period of stable prices from 1922 to 1930 following post-war readjustments. In 1920 at the peak of post-war inflation, living costs reached a level approximately 50 per cent above August 1939 levels after doubling in the preceding seven years. The greatest rise at that time came not during the war years, but in 1919 and the first half of 1920. Different budget groups contributed to these fluctuations by widely varying amounts, with foods and clothing being mainly responsible for major changes which have occurred in living cost levels. (See Charts 1 and 2 and Tables on Pages 28-36.)

FOODS

The August 1939 index for retail food prices was 74.9 which compared with a 1933 depression low of 60.4, a post-war peak of 149.7 in 1920, and a 1913 average of 66.2. Food price averages moved down more than 7 per cent during the year ended August 1939. Although the retail food price index for that month was materially above the 1913 average, a great many food staples were cheaper than in 1913. This was true of lard, eggs, butter, flour, prunes, and coffee. However, most meats were higher than at that time, and so also were milk, cheese, bread, rolled oats, rice, sugar, and potatoes. Average retail price levels in Canada for staple foods in August 1939 and other dates referred to above may be observed from the following statements. (See also Chart 1, Indexes on Pages 28-36 and Prices on Pages 1-27.)

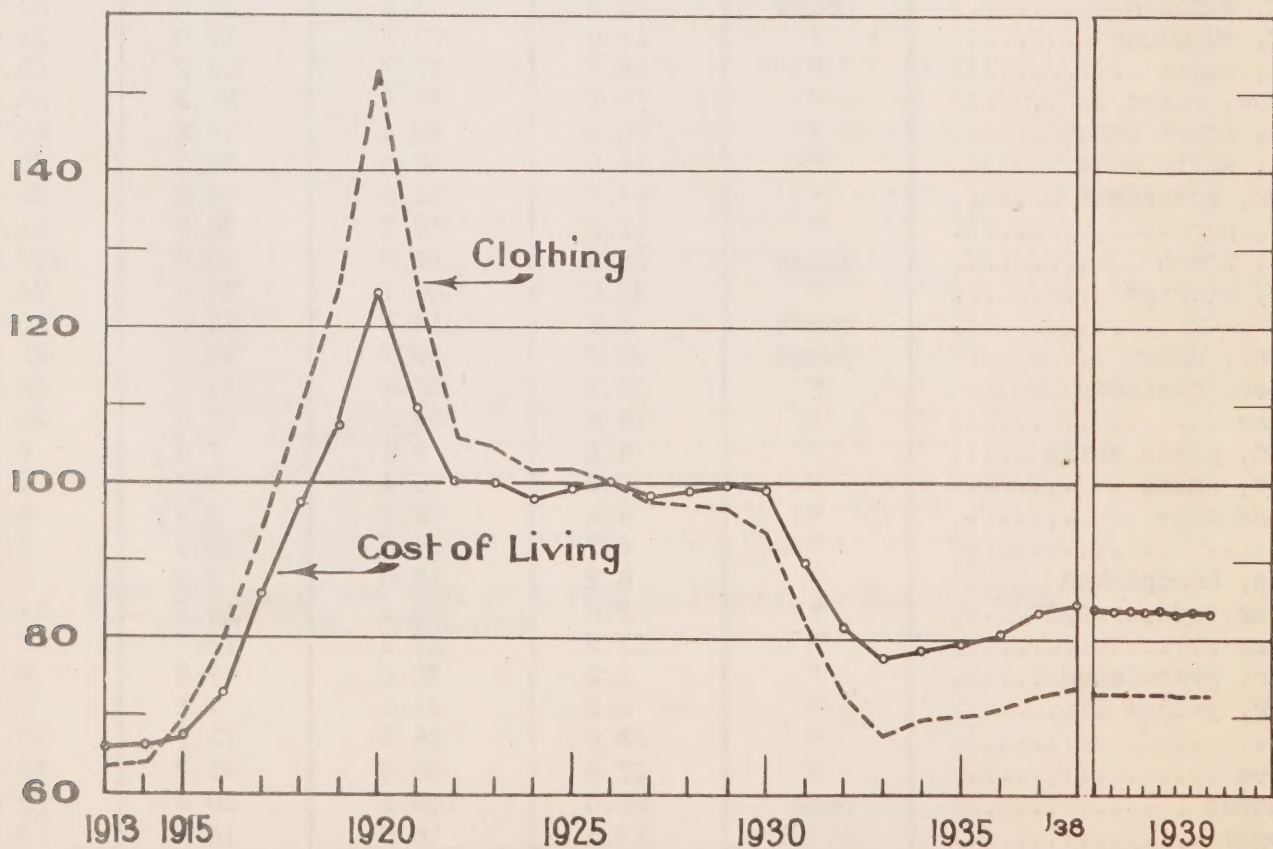

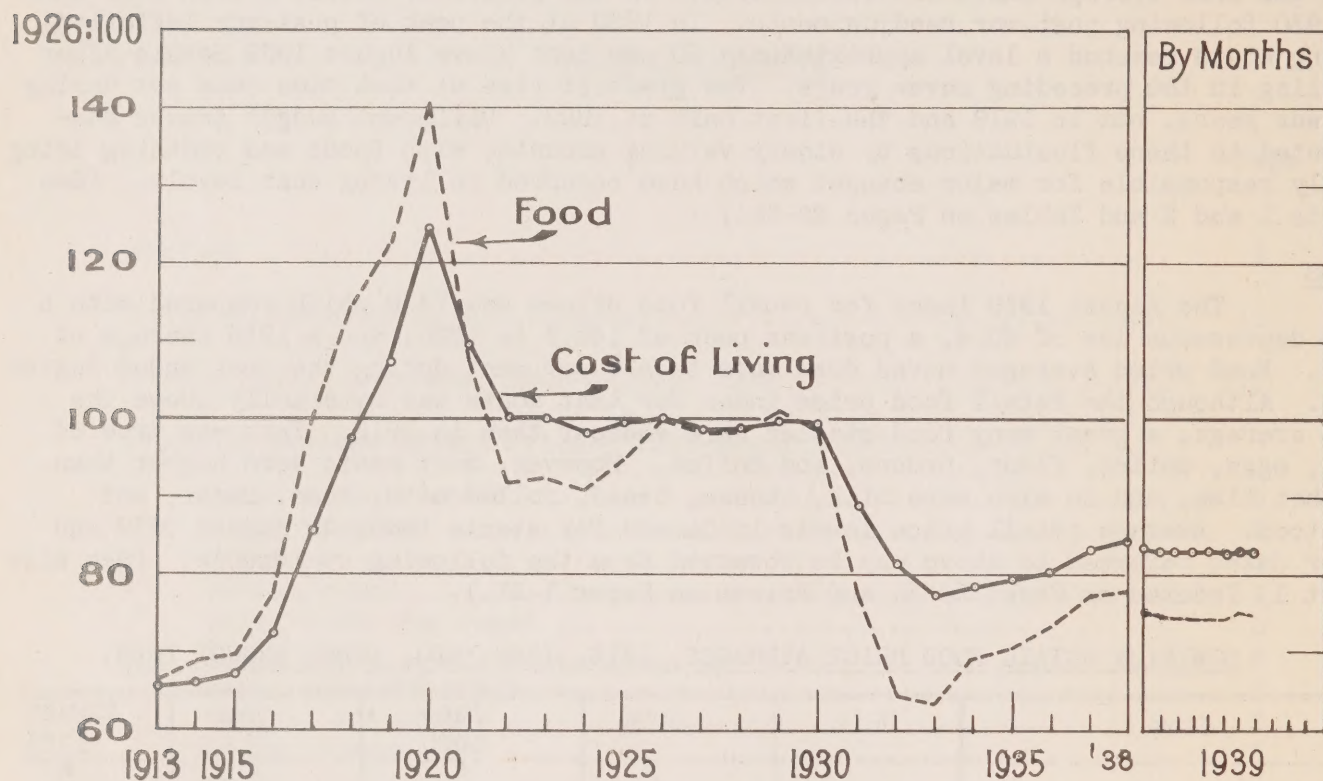

DOMINION RETAIL FOOD PRICE AVERAGES, 1913, JUNE 1920, 1926, AUGUST 1939.

## INDEX NUMBERS OF LIVING COSTS IN CANADA

1913-1939

# INDEX NUMBERS OF LIVING COSTS IN CANADA 1913-1939

### CLOTHING

The August 1939 index of retail clothing prices was 72.6, slightly lower than that for foods. Clothing prices also reached a lower relative level of 66.2 during 1933. Conversely they showed a greater rise than food prices during the post-war price advance to 160.1 in 1920. Clothing prices took longer to reach stable levels after 1920 than other family budget groups. (See Chart 1 and Tables on pages 28-36.)

### RENTALS

The movement of rentals since 1913 has been materially different from those of food and clothing. From 64.1 in 1913, an index of Canadian residential rentals advanced slowly but steadily to 105.9 in 1930. There was no post-war peak and subsequent reaction as in the case of commodities generally. The August 1939 rental index of 90.0 compared with a 1934 low of 79.7. (See Chart 2 and Tables on Pages 28-36.)

### FUEL

Fuel prices rose more slowly than living costs generally during the period of rising prices from 1913 to 1920. From 1921 to 1939 there has been a gradual decline in fuel price levels amounting to approximately 28 per cent. This was due principally to reductions in electricity rates and prices for coal. The August 1939 index for fuels (including coal, coke, wood, gas, and electricity) was 83.7, as compared with a 1933 average of 87.7, 116.4 at the beginning of 1921, and 65.8 for 1913. (See Chart 2, and Tables on Pages 28-36.)

### MISCELLANEOUS

This residual group comprises a wide range of household furnishings, fees and rates for services required by the average family. These items do not vary widely and a composite index for them has fluctuated least of the five groups in the general cost of living index during the past 26 years. The August 1939 miscellaneous index was 94.1, as compared with a low of 92.0 in 1934, 106.0 at the post-war peak in 1921 and 1922, and 66.2 for 1913. (See Chart 2 and Tables on Pages 28-36.)
